Allison Warner and Rob Davidson are ADK Wooden Boats. We've been building and restoring traditional wooden Adirondack Guideboats since 1999. We use only traditional materials and methods to replicate and restore these historic craft. We follow the forms of the old masters as well as innovating our own designs in our newly constructed Adirondack Guideboats.

Adirondack Wooden Guide Boats || New Construction ...

Adirondack Guideboat designs are unique to our company. Each of the boats was designed, adapted and created by Steve Kaulback, the company founder. The designs are an innovative blending of lines of Rushton and Grant beautifully using cedar strip epoxy composite construction method.

The Adirondack Guideboat is a flat-bottomed boat with a deep 'V'-shaped hull. It is symmetrical side-to-side and end-to-end. Bearing sharp stems on either ends, it is a true double-ender. The hull is lap-straked with a beveled overlap, making it smooth-skinned. The ribs and stems are sawn from the natural crooks of spruce roots.

The definitive guide to the history and makers of Adirondack guideboats

The Adirondack guideboat has survived for well over a century as a unique regional classic, first as a workboat in the rugged Adirondack mountain region of New York and later as a recreational craft. It is noted for its graceful lines, elegant curves, easy and speedy rowing, and for having a very high ooh-ahh value among casual observers. It may be easily built by accomplished amateur and professional woodworkers alike. In this book, John Michne explains, in his usual excruciating detail with wisps of wit here and there, how you can replicate a guideboat exactly as if it had just rolled out of an Adirondack boat shop a century ago. Built from laminated spruce ribs and covered in narrow edge-glued strips or traditionally planked in pine, it is a woodworker's dream challenge. Making every part of the boat (except the oarlocks) is detailed in 25 chapters, with over 270 shop photos and six appendices, including 16 pages of detailed dimensioned drawings by John Gardner, courtesy of Adirondack Experience. As an additional bonus, there are 12 full-size CAD drawings included at no extra cost via download. These drawings of ribs, seats, oars, and more eliminate the need for the builder to spend many hours doing tedious manual lofting even before starting construction.

Using the Wee Lassie as an example, the author opens your eyes to the natural beauty around you. A practical and beautiful craft, this lightweight and strong double-paddle canoe will carry you to waterways that are inaccessible in most boats.

The first comprehensive book on stripbuilding almost any type of small boat Strip-planking is a popular method of amateur boat construction, but until now there has never been a book that showed how to use it for more than one type of boat. Author Nick Schade presents complete plans for three boats of different types (canoe, kayak, and a dinghy) and shows you step-by-step how to build them. Written for all amateur builders, the book covers materials, tools, and safety issues.

A history of small craft used from the earliest times, when water was the only highway, to the 20th century's recreational use of motor boats on the waterways of the Adirondacks.

Concise explanations of the major naval and land battles of world history ending with 1905.

Ultralight canoes and small boats are things of beauty, their apparent delicacy concealing great strength. They are lapstrake-constructed from marine plywood planks, each plank overlapping the one below it in a gracefully curved hull. Epoxy glue along the laps gives the hull structural reinforcement, minimizing the need for framing and permitting an amazingly light structure. Round-bilged and elegant, they are built over jigs, but the method is straightforward and not time consuming. You can build a boat that will give you fun and satisfaction, one you can be proud

Read Free Adirondack Guide Boat Builders

of, in a winter of leisurely weekends. No fancy tools are needed, and care and patience will make up whatever you lack in woodworking skills. All the information you need is here. Tom Hill, the chief proponent of ultralight boatbuilding and its leading practitioner, describes the method from start to finish using a skiff and canoe as examples. In the appendix is a gallery of ultralight designs, all but one of which you can build without lofting. If you want more flexibility, however, you can adapt almost any lapstrake small-boat design, traditional or modern, to the ultralight method. With some lofting (directions for which are given) you may then build a wide range of boats whose offsets are available. And you may adjust planking thickness and scantlings to give your boat extremely light weight with normal strength, or moderate weight with great strength. Particularly if you lack an extensively equipped workshop and professional skills, Ultralight Boatbuilding will unlock exciting possibilities you considered out of reach.
