This review will cover recent advances in the genetics and pathomechanisms of CMT and how these are leading to the development of rational therapies. Recent findings: Pathomechanistic and therapeutic target advances in CMT include the identification of the ErbB receptor signalling pathway as a therapeutic target in CMT1A and pharmacological modification of the unfolded protein response in CMT1B.

Advances in Genetics has established itself as an outstanding vehicle for the dissemination of research results in genetics. Once again, authoritative papers are presented here, beginning with a review by Rai and Black highlighting the salient features of mosquito genomes and their evolution. The recent progress which has been made by the cloning and characterization of two cooperating partners of the Neurospora blue light signal transduction chain is presented by Linden, Balario, Arpaia ...
