This book examines the intersection of Organizational Behavior Management (OBM) and Industrial and Organizational Psychology (I/O Psychology). It argues that, whilst OBM and I/O Psychology have developed simultaneously, they have done so with minimal integration. I/O Psychology, a somewhat older field, has evolved to become widely accepted, both influencing management and social sciences and being affected by them. It can be viewed as a research-oriented subject that is closely aligned with human resources functions. With regards to the intersection of I/O Psychology with OBM, some practices are more closely related than others; and of those that are related, some are relatively consistent with OBM practices, while others are very inconsistent. Most I/O Psychology interventions focus on many people simultaneously, seeking to ensure that one intervention affects multiple employees as a cost-efficient way to improve organizations, while OBM is usually better than I/O Psychology at improving the behaviors of individuals and smaller groups or workers. This book provides a framework for understanding differences and similarities between I/O Psychology and OBM, and as such is an innovative compendium for students, scholars, applied psychologists, and human resource specialists. It was originally published as a special issue of the Journal of Organizational Behavior Management.

Organizational Behavior: Essential Theories of Motivation and Leadership analyzes the work of leading theorists. Each chapter includes the background of the theorist represented, the context in which the theory arose, the initial and subsequent theoretical statements, research on the theory by the theory's author and others (including meta-analysis and reviews), and practical applications. Special features including boxed summaries of each theory at the beginning of each chapter, two introductory chapters on the scientific method and the development of knowledge, and detailed and comprehensive references, help make this text especially useful for graduate courses in Organizational Behavior and Industrial/Organizational Psychology.

Individuals in modern societies move among a variety of social encounters each day. Often contradictory behaviors are required to carry out these interactions. If behaviors and values are inconsistent from one setting to another, is a single self capable of adjusting adequately to such inconsistencies? Or is the total self made up of several selves, capable of effective performance in a complex and contradictory society? This volume addresses these fundamental concerns of social psychology and social organization. Dubin concludes that human beings have evolved socially so that there is an effective match between personality structures of modern persons and the advanced social systems in which they live. Dubin finds that people function competently in most institutions while investing little positive motivation in their performance. They reserve strong motivations for limited, self-chosen central life interests that define their core self. This results in a two-tier structure of living. The first level consists of self-chosen actions and values constituting a central life interest, geared toward self-realization. The second tier encompasses the bulk of social action as required behavior, facilitating institutional functioning, and maintaining social order. In today's modern world the individual occupies a more central position than ever. Modern citizens are freer than in the past to expand their ideas about themselves, encouraged by industrial and commercial institutions, while seeking, in their central life interests, the realization of their creative individualism. For the future, Dubin envisions a social system expanding opportunities for a broader range of central life interests. At the same time, required behaviors will have a more limited range, but will be enforced more rationally and imperatively in the interests of social order. "Central Life Interests "is an original and perceptive exploration of the linkages between persons and society. It will be of interest to sociologists, psychologists, economists, and administrative scientists.

A unique compendium of international investigations into motivation and performance, this book offers chapters by industrial and organizational psychologists from the United States, Europe, Australia, and Japan as they share their theories, concepts, empirical evidence, and practical evidence regarding the subject. The volume focuses on three distinct themes: * the relationship between motivation and performance * practical examples of building and strengthening the motivating potential with particular attention paid to productivity and the health of the employees * the development of work motivation over time and the change of the relative importance of central variables Work Motivation provides an exceptional blend of modern theoretical approaches, technologically sound techniques for solving practical problems, and empirical results to prove theoretical and technical validities.
