Key Features:Y All aspects of Geoinformatics--Plane Surveying, Photogrammetry, Remote Sensing, GIS, GPS included.Y Gives basic concepts with principles of all aspects discussed.Y Measurements explained with neat line drawing>About the Book:This book is an attempt to bring the different fields of Geoinformatics under one fold to help the novices in gettingthe subject matter at one place. The book includes Plane Surveying, Photogrammetry, Remote Sensing,Geographic Information System (GIS), and Global Positioning System (GPS). The subject matter emphasizes onthe basic concepts and practices in use. The book has six sections as below:Section I introduces the Geoinformatics as a whole in the perspective of surveying as it has unlimited fields ofapplications. Section II provides basic concepts of errors in Plane Surveying, techniques of making linear andangular measurements for producing topographic maps of areas of moderate extents. Section III deals withPhotogrammetry and technique of measurements on aerial photographs to produce topographic maps. Section IVis devoted to Remote Sensing, principle of this technique, and its application. It also presents various remotesensing missions launched, and the technique of image interpretation and digital image processing. Section Vdiscusses the Geographic Information System (GIS) and its application, data models used in GIS, and how variousspatial entities are related to each other in GIS environment through topology. Section VI is on Global PositioningSystem (GPS) which now finds its use in our day-today life. It is a technology for gathering (x, y, z) coordinates ofpoints anywhere on the globe at any time making use of artificial satellites devoted to GPS. This section explainsprinciple of working of GPS and its use in surveying.

Plane surveying is a textbook on surveying which provides exhaustive coverage on the subject.Each chapter is preceeded by an introduction to show the contents of the chapter at a glance.

Beginning with elementary surveying techniques Surveying and Levelling, covers the entire spectrum of the subject in a single volume. This student-friendly book incorporates a large number of exercise problems.

This text provides the fundamentals of the emerging technology of remote sensing combined with GIS. It provides sufficient knowledge of these technologies applied in different fields avoiding the voluminous details required at research level.

This book is meant for the first course on Surveying and Levelling of most of the universities. It covers all basic methods of surveying and levelling, applications of surveying and levelling, calculation of areas and volumes of earth work involved in the field work. Minor instruments used in the field are also explained. The author has taken care to use simple and lucid language and to explain the subject with neat sketches. A number of problems are solved to make the subject clear. Diploma and degree students of Civil Engineering, Architecture and Mining will find this book useful
