Solved: Cisco Unified Personal Communicator eon -> Cisco ->

This key is used to start Cisco Unified Personal Communicator in deskphone mode. In a VDI environment the client needs to be started in deskphone mode. To meet this requirement, this registry subkey has been introduced. If the value of this key is set to 1, the client will start in deskphone mode. If is not set, or has a value other than 1, the client will start up by using the last phone mode the client used during start up.
