Concise and easy to read, this popular manual has provided a practical approach to the diagnosis and medical management of problems in the newborn through seven outstanding editions. The Eighth Edition of Cloherty and Stark’s Manual of Neonatal Care maintains that tradition of excellence, offering NICU physicians, neonatal-perinatal fellows, residents, and neonatal nurse practitioners quick access to key clinical information, fully updated to reflect recent advances in the field. In the period of about five years since the first edition of this book appeared, many changes have occurred in the fruit juice and beverage markets. The growth of markets has continued, blunted to some extent, no doubt, by the recession that has featured prominently in the economies of the major consuming nations. But perhaps the most significant area that has affected juices in particular is the issue of authenticity. Commercial scandals of substantial proportions have been seen on both sides of the Atlantic because of fraudulent practice. Major strides have been made in the development of techniques to detect and measure adulterants in the major juices. A contri bution to Chapter 1 describes one of the more important scientific techniques to have been developed as a routine test method to detect the addition of carbohydrates to juices. Another, and perhaps more welcome, development in non-carbonated beverages during the past few years is the rapid growth of sports drinks. Beverages based on glucose syrup have been popular for many years, and in some parts of the world isotonic products have long featured in the sports arena. A combination of benefits is now available from a wide range of preparations formulated and marketed as sports drinks and featuring widely in beverage markets world-wide. A new chapter reviews their formulation and performance characteristics. Another major trend in the area of fruit-containing non-carbonated bever ages is the highly successful marketing of ready-to-drink products.

Inhis utopian novel Hiera Anagraphe (Sacred History)Euhemerus of Messene (ca. 300 B.C.) describes his travel to the island Panchaia in the Indian Ocean where he discovered an inscribed stele in the temple of Zeus Triphylus. It turned out that the Olympian gods (Uranos, Kronos, Zeus) were deified kings. The travels of Zeus allowed to describe peoples and places all over the world. Winiarczyk investigates the sources of the theological views of Euhemerus. Heproves that Euhemerus’ religious views were rooted in old Greek tradition (the worship of heroes, gods as founders of their own cult, tombs of gods, euergetism, rationalistic interpretation of myths, the explanations of the origin of religion by the sophists, the ruler cult). The description of the Panchaian society is intended to suggest an archaic and closed culture, in which the stele recording res gestae of the deified kings might have been preserved. The translation of Ennius’ Euhemerus sive Sacra historia (ca. 200 - ca. 194) is a free prose rendering, which Lactantius knew only indirectly. The book is concluded by a short history of Euhemerism in the pagan, Christian and Jewish literature.

From gleaming hardstone statues to bright frescoes, the unexpected and often spectacular Egyptian objects discovered in Roman Italy have long presented an interpretive challenge. How they shaped and were shaped by religion, politics, and identity formation has now been well researched. But one crucial function of these objects remains to be explored: their role as precious goods in a collector’s economy. The Romans imported and recreated Egyptian spectacles in the most opulent materials available – gold, gems, expensive wood, ivory, luxurious textiles – and displayed them like true treasures. This is due in part to the way Romans encountered these items, as argued in this book: first as dazzling spolia from the war against Cleopatra, then as costly wares exchanged over the expanding Roman trade routes. In this respect, Romans treated Egyptian art surprisingly similarly to Greek art. By examining the concrete mechanisms through which Egyptian objects were acquired and displayed in Rome, this book offers a new understanding of this impressive material at the crossroads of Hellenistic, Roman, and Egyptian culture.

This book presents to all those who are interested in the history of Anaesthesiology historical details and information on the development of anaesthesiology in Germany and the remarkable growth of our Society. At the founding session of the German Society of Anaesthesia in Munich on 10 April 1953 42 persons had signed the founding documents. Today about 12,000 anaesthetists are members of the German Society of Anaesthesiology and Intensive Care Medicine, making the DGAI the biggest national society within ESA. Well known are the pioneering contributions of German scientists and surgeons to the development of general, regional and local anaesthesia during the 19th and the beginning of the 20th centuries. But less known outside Germany are the reasons for the delayed evolution of anaesthesiology as a specialty of its own in German medicine, far later than in the UK, Scandinavia or the USA. In this book you will find answers to this question and detailed information on the successful evolution of anaesthesiology especially at the Faculties of Medicine at German universities.

In The Dutch Language in Japan (1600-1900) Christopher Joby offers the first book-length account of the knowledge and use of the Dutch language in Tokugawa and early Meiji Japan, which had a profound effect on Japan’s language, society and culture.

This book addresses various aspects of acoustic-phonetic analysis, including voice quality and fundamental frequency, and the effects of speech fluency and non-native accents, by examining read speech, public speech, and conversations. Voice is a sexually dimorphic trait that can convey important biological and social information about the speaker, and empirical findings suggest that voice characteristics and preferences play an important role in both intra- and intersexual selection, such as competition and mating, and social evaluation. Discussing evaluation criteria like physical attractiveness, pleasantness, likability, and even persuasiveness and charisma, the book bridges the gap between social and biological views on voice attractiveness. It presents conceptual, methodological and empirical work applying methods such as passive listening tests, psychoacoustic rating experiments, and crowd-sourced and interactive scenarios and highlights the diversity not only of the methods used when studying voice attractiveness, but also of the domains investigated, such as politicians' speech, experimental speed dating, speech synthesis, vocal pathology, and voice preferences in human interactions as well as in human-computer and human-robot interactions. By doing so, it identifies widespread and complementary approaches and establishes common ground for further research.
