then we compute the force F 2, due to q 2 alone; and so on. Finally, we take the vector sum of all these individual forces: F = F I + F 2 + F 3 + ... To solve the force on Q using the superposition principle sounds very easy, BUT, the force on Q depends not only on the separation distance r between the charges,

(b) Expand the determinant by minors to get a×b= ˆe 1(a 2b 3 −a 3b 2)− ˆe 2(a 1b 3 −a 3b 1)+ˆe 3(a 1b 2 −a 2b 1). Using the Levi-Civit`a symbol to supply the signs, this is the same as the suggested identity
