A V8 engine is an eight-cylinder piston engine in which the cylinders share a common crankshaft and are arranged in a V configuration. The first known working V8 engine was produced by the French company Antoinette in 1904 for use in aircraft, and the 1914–1935 Cadillac L-Head engine is considered the first automotive V8 engine to be produced in significant quantities. The popularity of V8 engines in cars was greatly increased following the 1932 introduction of the Ford Flathead V8.

Frenchman Leon Levavasseur was a 39-year-old inventor in 1902 when he took out a patent for the first V-8 engine he called the Antoinette. The V8 since then has become the most reliable and efficient internal combustion engine to power automobiles and to see extensive use in power boats and early aircraft.

[Who Invented the V8 Engine? | It Still Runs](#)

First produced in 1914, the V8 engine is a fairly compact layout for large engine sizes (which were need ed in order to move heavy vehicles at sufficient speed) and proved to be the most popular engine layout (in terms of sales) in America since it was introduced and has become famous worldwide.

[The History and Development of the V8 Engine](#)

The Ford flathead V8 is still heralded today as one of the first pioneers in 'hot rod' engines. Darracq were the first automobile company to put a V8 engine into the speed-records book. A relatively advanced design for 1906, the Darracq had pushrod overhead valves, 25 litres capacity and 200 hp output.
