A derivative is a financial instrument that derives its value from the performance of an underlying asset. In simple terms, a derivative is a legal contract between a buyer and a seller, entered into today, regarding a transaction that will be fulfilled at a specified time in the future. This legal contract is based on an underlying asset.

"The derivative of  $f$  equals the limit as  $\Delta x$  goes to zero of  $f(x+\Delta x) - f(x)$  over  $\Delta x$  " Or sometimes the derivative is written like this (explained on Derivatives as  $dy/dx$ ): The process of finding a derivative is called "differentiation". You do differentiation... to get a derivative.

### Introduction to Derivatives - MATH

In essence, any security which has its value determined by another asset is a derivative contract. The instrument from, which a derivative gets its value is called the underlying asset. The most important thing to keep in mind is the fact that the value of a derivative contract is depending upon the value of something else.
