Module aims. This module introduces students to the phonetic and phonological analysis of language, starting with phonetics and moving on to phonology. The phonetics part covers the basics of articulatory and impressionistic phonetics. The phonology part covers the position of phonology within the human linguistic system, recurrent phonological phenomena in the world's languages and the phonological notation most commonly used by linguists.

Success in mastering any language requires knowledge in speaking, reading, and writing the language. The speaking component requires the understanding and use of correct pronunciation, emphasis, and syntactic patterns. The written component requires mastery of the alphabet, spelling, and the ability to write, print, or type the pattern. Very early in the learning process, speakers of the English language become keenly aware of the language's lack of sound to symbol correspondence. To help speech/language researchers, media personnel, individuals learning English as a second language, and others interested in correct pronunciation, the International Phonetic Alphabet (IPA) was devised. Extensively class tested, this book offers a practical understanding approach to phonetics and the IPA in a workbook format. It will be welcomed by professionals, students, and trainees in the fields of communication science, communication disorders, speech pathology, and linguistics.
