America was made by the railroads. The opening of the Baltimore & Ohio line – – the first American railroad – – in the 1830s sparked a national revolution in the way that people lived thanks to the speed and convenience of train travel. Promoted by visionaries and built through heroic effort, the American railroad network was bigger in every sense than Europe ' s, and facilitated everything from long-distance travel to commuting and transporting goods to waging war. and was the catalyst for America ' s rise to world-power status. Every American town, great or small, aspired to be connected to a railroad and by the turn of the century, almost every American lived within easy access of a station. By the early 1900s, the United States was covered in a latticework of more than 200,000 miles of railroad track and a series of magisterial termini, all built and controlled by the biggest corporations in the land. Helpless to staunch the flow and realizing their vessel would inevitably sink, the crew escaped to the accompanying tug, and watched as their ship plunged beneath Lake Michigan. Its loss unlamented, its career unheralded, it slumbered on the sandy bottom in the same obscurity that had shrouded its earlier work days as a steam

freighter sailing the Great Lakes. However, the vessel's anonymity ended in 2006 when Michigan Shipwreck Research Associates located the sunken wreck of the Hennepin. It is now listed on the National Register of Historic Places as the world's first self-unloading vessel. *Buckets and Belts: Evolution of the Great Lakes Self-Unloader* traces more than a century of innovative technological advancements in the conveying of bulk cargos from the Hennepin's conversion to a self-unloader in 1902 to today's mammoth thousand-foot long lakers. Enhanced with the most comprehensive collection of self-unloader images ever published and dozens of underwater photographs, the book also explores the lives of the people who designed these
