NASA.gov brings you the latest images, videos and news from America's space agency. Get the latest updates on NASA missions, watch NASA TV live, and learn about our quest to reveal the unknown and benefit all humankind.

<p>The Moon NASA</p> Hands down favorite song from the album. Thank you T. Stebbins for your continuous and increasingly amazing contributions to the world. -----Title?On The M...

<p>EURObeat ENG SUBS?On The Moon?A-ONE? - YouTube</p> We know that the Moon has almost no atmosphere and only about one-sixth of Earth’s gravity. We even know that there is quite a bit of frozen water tucked away in craters near the Moon’s poles. There is no wind or air on the Moon to help “erase” craters, so the surface is covered with the remains of old and new impacts.

<p>All About the Moon NASA Space Place - NASA Science for Kids</p> The moon was the focus of the space race between the United States and the Soviet Union in the 1960s and 1970s but then was largely ignored until recent years.
--

<p>Can Israelis Put Two Landers on the Moon at Once? - The ...</p> (CNN) There may be more water on the moon than previously believed, including on its sunlit surface. This water could be used as a resource during upcoming missions -- like NASA's return of humans...
--

<p>Moon NASA announcement: SOFIA mission finds water on the ...</p> Astronauts selected for NASA moon program 02:32. Eighteen astronauts – nine men and nine women – have been selected to begin training for upcoming Artemis missions to the moon, NASA announced ...

<p>NASA names 18 astronauts to train for Artemis moon ...</p> There's a lot we know about the Moon: it's roughly one-sixth the size of the Earth, is about 4.6 billion years old, is approximately 238,000 miles distant from the Earth, has no atmosphere, and is covered with a fine gray powder. We've walked on the Moon during six Apollo missions, and we've sent many more probes there to map it and study it.
--

<p>What Are These Strange Looking Things on the Moon?</p> 2010's Man on the Moon II successfully developed the themes of its predecessor – hedonism, fame, and depression collide – resulting in the creation of Cudi's destructive alter-ego Mr. Rager.
--

<p>NASA Tour of the Moon - YouTube</p> This is a partial list of artificial materials left on the Moon, many during the missions of the Apollo program.The table below does not include lesser Apollo mission artificial objects, such as a hammer and other tools, retroreflectors, Apollo Lunar Surface Experiments Packages, or the commemorative, artistic, and personal objects left by the twelve Apollo astronauts, such as the United ...

<p>List of artificial objects on the Moon - Wikipedia</p> As well as dwelling at night, the moon – a celestial being and a symbol of liberty – dwells in pop music's most introspective moments.
--

<p>On the Moon</p> The New Moon Phase occurs when the Moon is completely dark with zero-percent luminosity, while the Full Moon Phase is completely bright with 100-percent luminosity. The First and Last Quarter phases happen when the Moon is exactly half illuminated, with 50-percent luminosity.

<p>Moon Phases Calendar for the month of December 2020</p> Being that it takes the weight of an object on earth and converts it to lunar weight, the formula is Weight on the Moon= (Weight on Earth/9.81m/s2) * 1.622m/s2. To find the weight on the moon, we divide the weight on earth by the earth's force of gravity, which is 9.81m/s 2. This calculates the mass of the object.
--

<p>Weight On the Moon Calculator - Learning about Electronics</p> The Moon (or Luna) is the Earth's only natural satellite and was formed 4.6 billion years ago around some 30-50 million years after the formation of the solar system. The Moon is in synchronous rotation with Earth meaning the same side is always facing the Earth.

<p>Moon Facts - Interesting Facts about the Earth's Moon</p> Books. Man on the Moon, a 2002 children's book by Simon Bartram; A Man on the Moon: The Voyages of the Apollo Astronauts, a 1994 nonfiction book by Andrew Chaikin; Film and TV. --

<p>Man on the Moon - Wikipedia</p> The gravity on the moon is one-sixth of the Earth's gravity. It means that something will be one-sixth as heavy on the Moon than on Earth. The Moon is a rocky and dusty place. The Moon moves slowly away from the earth at a rate of 3.8 cm per year, due to the effect of tidal dissipation.
--

<p>Moon - Simple English Wikipedia, the free encyclopedia</p> NASA has selected 18 astronauts from its corps to form the Artemis Team and help pave the way for the next astronaut missions on and around the Moon as part of the Artemis program.
--

<p>NASA Names Artemis Team of Astronauts Eligible for Early ...</p> During a new moon, the Moon lies between Earth and the Sun. So, the side we normally see from here on Earth that's normally lit by the Sun is in its shadow. Only when the Moon is opposite from the Sun do we see that part of the surface lit up. At that point, the far side is shadowed and is truly dark.
--

<p>What's Really on the Far Side of the Moon</p> 3) there is more text in the paperback version, it's in the present tense and talks as if the child is going to the moon (e.g. To go outside, you have to put on a space suit). The hardback version has slightly less text and it's in the past tense and talks about what the astronauts did (e.g.

The exciting and inspiring true story of Apollo 8, the first crewed spaceship to break free of the Earth's orbit and reach the moon, by the best-selling author of Apollo 13. What's more exciting than spaceships and astronauts? How about a spaceship carrying the first astronauts ever to see the moon firsthand--on Christmas! The year was 1968, and the American people were still reeling from the spacecraft fire that killed the Apollo 1 crew a year earlier. On top of that, there were rumors that the Russian cosmonauts were getting ready to fly around the moon. NASA realized that they needed to take a bold step--and that they needed to take it now. They wanted to win the space race against Russia and hold true to President Kennedy's promise to put a man on the moon by the end of the decade. So in a risky move, a few days before Christmas of that year, they sent Frank Borman, Jim Lovell, and Bill Anders to the moon! This book about the exciting and inspiring true story of Apollo 8, the first crewed spaceship to break free of Earth's orbit and reach the moon, tells the story of these three brave men, the frantic rush to get their rocket ready, and the journey that gave the American people--and the world--a new look at the planet we live on and the corner of space we inhabit. Filled with the science and training required to put a person into space, and every detail of what it's like to live in a spaceship for days on end (including what happens when astronauts need to use the bathroom), this book is sure to leave kids clamoring for a spot on the next mission to outer space.

Have you ever wondered if there are seasons on the moon or if space tourism will ever become commonplace? So has Dr. Maggie Aderin-Pocock. In fact, she earned her nickname “Lunatic” because of her deep fascination for all things lunar. In her lucidly written, comprehensive guide to the moon, Aderin-Pocock takes readers on a journey to our closest celestial neighbor, exploring folklore, facts, and future plans. She begins with the basics, unpacking everything from the moon’s topography and composition to its formation and orbit around the Earth. She travels back in time to track humanity’s relationship with the moon – beliefs held by ancient civilizations, the technology that allowed for the first moon landing, a brief history of moonazing, and how the moon has influenced culture throughout the years – and then to the future, analyzing the pros and cons of continued space travel and exploration. Throughout the book are sidebars, graphs, and charts to enhance the facts as well as black-and-white illustrations of the moon and stars. The Book of the Moon will be published for the 50th anniversary of the moon landing.

A celebration of the first moon landing in July 1969 offers an accessible history of the Apollo space program from its less-than-auspicious beginnings, through its greatest triumphs, to its untimely end, based on in-depth interviews with twenty-three of the moon voyagers. Reissue. 35,000 first printing.

LONGLISTED FOR THE NATIONAL BOOK AWARD • YALSA EXCELLENCE IN NONFICTION FINALIST • A ROBERT F. SIBERT HONOR BOOK This beautifully illustrated, oversized guide to the people and technology of the moon landing by award-winning author/illustrator John Rocco (illustrator of the Percy Jackson series) is a must-have for space fans, classrooms, and tech geeks. Everyone knows of Neil Armstrong’s famous first steps on the moon. But what did it really take to get us there? The Moon landing is one of the most ambitious, thrilling, and dangerous ventures in human history. This exquisitely researched and illustrated book tells the stories of the 400,000 unsung heroes--the engineers, mathematicians, seamstresses, welders, and factory workers--and their innovations and life-changing technological leaps forward that allowed NASA to achieve this unparalleled accomplishment. From the shocking launch of the Russian satellite Sputnik to the triumphant splashdown of Apollo 11, Caldecott Honor winner John Rocco answers every possible question about this world-altering mission. Each challenging step in the space race is revealed, examined, and displayed through stunning diagrams, experiments, moments of crisis, and unforgettable human stories. Explorers of all ages will want to pore over every page in this comprehensive chronicle detailing the grandest human adventure of all time!

A new title in the fantastic First Reading series, part of the Usborne Young Reading Programme. Aimed at children who are beginning to read. Developed in consultation with Alison Kelly, who is a Principal Lecturer in Education and an early reading specialist from Roehampton University.

Former NASA Astronaut Harrison Schmitt advocates a private, investor-based approach to returning humans to the Moon—to extract Helium 3 for energy production, to use the Moon as a platform for science and manufacturing, and to establish permanent human colonies there in a kind of stepping stone community on the way to deeper space. With governments playing a supporting role—just as they have in the development of modern commercial aeronautics and agricultural production—Schmitt believes that a fundamentally private enterprise is the only type of organization capable of sustaining such an effort and, eventually, even making it pay off.

This special edition of Apollo Expeditions to the Moon, an official NASA publication, commemorates the fiftieth anniversary of the July 20, 1969, Moon landing with a thrilling insider's view of the space program. Essays by participants – engineers, astronauts, and administrators – recall the program's unprecedented challenges. Written in direct, jargon-free language, this compelling adventure features more than 160 dazzling color photographs and scores of black-and-white illustrations. Insights into management challenges as well as its engineering feats include contributions from Michael Collins, Buzz Aldrin, Alan Shepard, and other astronauts; NASA administrator James E. Webb; Christopher C. Kraft, head of the Mission Control Center; and engineer Wernher von Braun. Their informative, exciting narratives explore the issues that set the United States on the path to the Moon, offer perspectives on the program's legacy, and examine the particulars of individual missions. Journalist Robert Sherrod chronicles the selection and training of astronauts. James Lovell, commander of the ill-fated Apollo 13, recounts the damaged ship's dramatic return to Earth. Geologist and Apollo 17 astronaut Harrison Schmitt discusses the lunar expeditions' rich harvest of scientific information. These and other captivating firsthand accounts form an ideal introduction to the historic U.S. space program as well as fascinating reading for all ages. This new expanded edition includes a chronology of the Apollo project, additional photographs, and a new Introductory Essay by historian Paul Dickson that offers a modern retrospective of the Moon landing, discussing its place in the world of space exploration and its impact on American history and culture.

Considers the moon as a frontier that has been only partially explored, looking at its history, geography, and weather, as well as what people would require to live and work there. Includes activities.

Introduces the woman mathematician whose childhood love of numbers led to her prestigious education and contributions at NASA while explaining how her handwritten codes proved essential throughout numerous space missions.
