= N (7) Schroeder asks us to prove that for a system in thermal and diffusive equilibrium with a reservoir,  $F$  tends to decrease. I suspect he would use a derivation similar to that leading up to his equation 5.29 for  $F$ , but as I don't trust that method, I'll use the method that deals with the total entropy of the system.

equation (in other words, a solution for  $t \neq 1$ ). Use this equation to obtain the time evolution  $\langle N_1 \rangle(t)$  of the average value of  $N_1$ .

Compare this analytical form with the results of your simulations.

\*\*\* Note that  $\langle N_1 \rangle(t) = \sum_{N_1} N_1 P(N_1; t)$ : Using the stochastic equation, it is easy to see that  $\langle N_1 \rangle(t + \Delta t) = \frac{1}{2} N \langle N_1 \rangle(t) + 1$ ; which leads to ...
