**UroCuff Non-Invasive Pressure Flow Test Author with her Books** *Urodynamik*

Urodynamic tests are used to diagnose patients who have urinary incontinence or other lower urinary tract symptoms. These tests are given to both men and women. Urodynamic tests are used to measure: Nerve and muscle function.

### *Urodynamic Testing: What Is It, Procedure & What To Expect*

Urodynamic studies (UDS) test how well the bladder, sphincters, and urethra hold and release urine. These tests can show how well the bladder works and why there could be leaks or blockages. There are many types of urodynamic tests.

### *What is Urodynamics? - Urology Care Foundation*

Urodynamic testing is any procedure that looks at how well the bladder, sphincters, and urethra are storing and releasing urine. Most urodynamic tests focus on the bladder's ability to hold urine and empty steadily and completely. Urodynamic tests can also show whether the bladder is having involuntary contractions that cause urine leakage.

Centile rankings allow the urine flow rates of specific male and female populations to be compared. The maximum and average urine flow rates of urodynamic patients (504 consecutive male and 168 consecutive female) were converted into centile rankings. These centile rankings were then compared with the respective urodynamic diagnoses.
