High blood pressure is a significant public health challenge these days due to its high prevalence, and the concomitant increase in the risk of other high blood pressure-related complications. Since there are few signs, this potential fatal often goes unnoticed. While high blood pressure usually doesn't show symptoms for the first 10-20 years, it slowly but surely damages the arteries and strains the heart. This is why this condition is called the "silent killer." Prolonged high blood pressure accelerates arteriosclerosis, which is the leading cause of vascular disease, stroke, heart failure, and renal failure. Advanced warning signs include rapid pulse, dizziness, vision disturbances, sweating, headache, and shortness of breath. It can be because of age, diet, obesity, stress, smoking, race, or heredity. The good thing is there are natural solutions without medication that you can maximize. In this book, you will learn more about the causes, diseases associated with it, natural foods to help control high blood pressure, and effective meal plans for you.

Written by experts in the field, this book provides an overview of all forms of broadband subscriber access networks and technology, including fiber optics, DSL for phone lines, DOCSIS for coax, power line carrier, and wireless. Each technology is described in depth, with a discussion of key concepts, historical development, and industry standards. The book contains comprehensive coverage of all broadband access technologies, with a section each devoted to fiber-based technologies, non-fiber wired technologies, and wireless technologies. The four co-authors' breadth of knowledge is featured in the chapters comparing the relative strengths, weaknesses, and prognosis for the competing technologies. Key Features: Covers the physical and medium access layers (OSI Layer 1 and 2), with emphasis on access transmission technology Compares and contrasts all recent and emerging wired and wireless standards for broadband access in a single reference Illustrates the technology that is currently being deployed by network providers, and also the technology that has recently been or will soon be standardized for deployment in the coming years, including vectoring, wavelength division multiple access, CDMA, OFDMA, and MIMO Contains detailed discussion on the following standards: 10G-EPON, G-PON, XG-PON, VDSL2, DOCSIS 3.0, DOCSIS Protocol over EPON, power line carrier, IEEE 802.11 WLAN/WiFi, UMTS/HSPA, LTE, and LTE-Advanced
